Update to Foreign Space Object Determination - Consultation 34/2019

Dear Mr. Hose,

Swarm Technologies, Inc. ("Swarm") would like to support the proposal of the Australian Communications and Media Authority ("ACMA") to include Swarm in the latest update to the Foreign Space Object Determination. Swarm's narrow-band satellite constellation will bring additional competition and cost-efficient satellite connectivity to the Australian market. As the deployment of Internet of Things ("IoT") sensors and devices continues to experience significant growth, Swarm is ready to provide satellite services alongside other providers to support the multitude of IoT applications.

We confirm the information regarding the Swarm system as outlined in the ACMA draft update to the Foreign Space Object Determination.

We very much appreciate the efforts by the ACMA team and would like to thank ACMA for creating a transparent and welcoming environment for new entrants, which benefits industry as well as users.

Sincerely,

Annette M. Purves
