

Attention
Chris Worley
Spectrum Planning Section
Australian Communications and Media Authority

Having read the information in IFC-13-2020 on the Possible use of the 5351.5–5366.5 kHz band by the amateur service

I would like to provide my support for Option 2 as presented, offering VK amateur radio operators the ability to utilise 5MHz as mandated at the ITU WRC-15 conference.

- Option 2: Australia-wide access to 5351.5–5365 kHz, that is, exclude the top 1.5 kHz to mitigate against most known sharing issues.

Thanks
Andrew Scott
