**Subject:** HPRM: Spectrum reallocation for the 3.6 GHz band

To whom it may concern,

We understand that the 3.6 GHz band will be used for mobile technology in the future.  
We accept this and agree with the need for more spectrum for 5G services.

We have a large number of our customers who are using the 3.6GHz as their only means of internet and we would appreciate at least 7 years to give us time to transition our customers to different technology, which will be an expense to our business and will involve us changing technology at customers properties.

We look forward to your notification regarding the set date that licensing re-allocation affects us.

Thanks
