**Subject:** Proposed options for Amateur Licensing

Dear Sirs, I wish to submit my opposition to the proposal known as option 3 (Class licences for Amateur radio operator).

Under apparatus licensing, I have the protection offered by the relevant authorities, to follow up interference complaints that I may experience due to unwarranted operations or spurious transmissions I may encounter on the amateur bands. I also have the ability to have action taken against poor quality equipment being imported into and used in Australia that causes such interference. This not just applies to radio equipment but to any electronic devices that may emit radiation that causes interference with my operations.

My preferred option is number 2, apparatus licensing with some simplification/ revision of the regulations.

Thank you

Douglas McWilliam
