Exploring the future use of the 1880–1920 MHz band Discussion Paper November 2021

Thank you for the opportunity to comment on the paper listed above.

Event Communications Australia are the Australasian distributors of Green-Go Digital Communications systems (www.greengodigital.com). These products have been sold by our company in Australia and New Zealand for over three 3 years and are in use in situations such as broadcast, live entertainment, sporting events, education and security applications.

Green-Go and other competing products successfully utilize DECT frequencies and it is our estimation that *Green-Go Digital Intercom 1.9HGZ DECT communication systems, alone*, are used in approximately 10% (and growing) of the worldwide production (and other) wireless communication system applications. These systems have a life span of 7-10 years, and are a considerable investment for these users.

Should the ACMA decide to make any substantive changes to the LIPD, users will need a minimum of Five (5) years to transition to alternative solutions, as the manufacturers would need to completely redesign their products using whatever technology is deemed appropriate / compliant.

Once again, thank you for the opportunity to comment. Should there be any questions I can assist with directly, I am only too happy to assist.

Yours sincerely,

Rod McKinnon
