

nbn response to ACMA consultation paper: “Remaking the Fixed Licence LCD and revised arrangements for the 3.4 – 4.0 GHz band”

nbn appreciates the opportunity to engage with the ACMA throughout the process of introducing arrangements for Highly Localised WBB systems. The proposed approaches address the feedback provided by nbn during the Technical Liaison Group to ensure the ongoing and effective operation of the **nbn** Fixed Wireless network. Specifically, that there is adequate protection for incumbent nbn services in the outer-metro areas and nbn is not unreasonably constrained in its ability to deploy new and more spectrally efficient technologies in the future. Additionally, we welcome the limit of an allocation period to 13 Dec 2030 to facilitate any further optimisation across the band at that point.

nbn does not have additional comments on the other aspects raised in this consultation paper.
