

Submission in response to
ACMA Consultation

**Remaking the sunseting
radionavigation satellite
service class licence**

Public Version

May 2025

OPTUS FEEDBACK

1. Optus welcomes the opportunity to provide feedback to the Australian Communications and Media Authority (ACMA) consultation on *Remaking the sunseting radionavigation satellite service class licence*.
2. The Radiocommunications (Radionavigation-Satellite Service) Class Licence 2015 (RNSS Class Licence) authorises the use of RNSS receivers in specified shared frequency bands. This is due to sunset on 1 October 2025.
3. The draft Radiocommunications (Radionavigation Satellite Service) Class Licence 2025 maintains the operation and effect of the RNSS Class Licence with minor changes to remove Clause 5 concerning the standards and equipment rules as these provisions are covered by other legislative instruments made by the ACMA.
4. Additional information regarding the arrangements and instruments that cover the removal of this would be appreciated. Further, an explanation of the impact of this removal would be helpful, which we acknowledge could be provided in the form of an Explanatory Statement accompanying the remade instrument.
5. Optus welcomes the remaking of the RNSS Class Licence noting that:
 - (a) A person authorised to operate an RNSS receiver under this class licence will continue to meet the device compliance requirements of any standard or equipment rules applicable to it.
 - (b) We welcome inclusion of note in section 7 regarding RNSS receivers operating under this class licence will not be afforded protection from interference caused by other radiocommunication devices.
